

DS 330: Visual Analytics for Data Sciences

Welcome and Outline

- Today's agenda
 - Course introduction and policies
 - Key technologies used in this class

Teaching Team

- Xiaolong "Luke" Zhang, instructor
- TA: Tianchun Wang
- LA: Mohamed Elmanzalawi

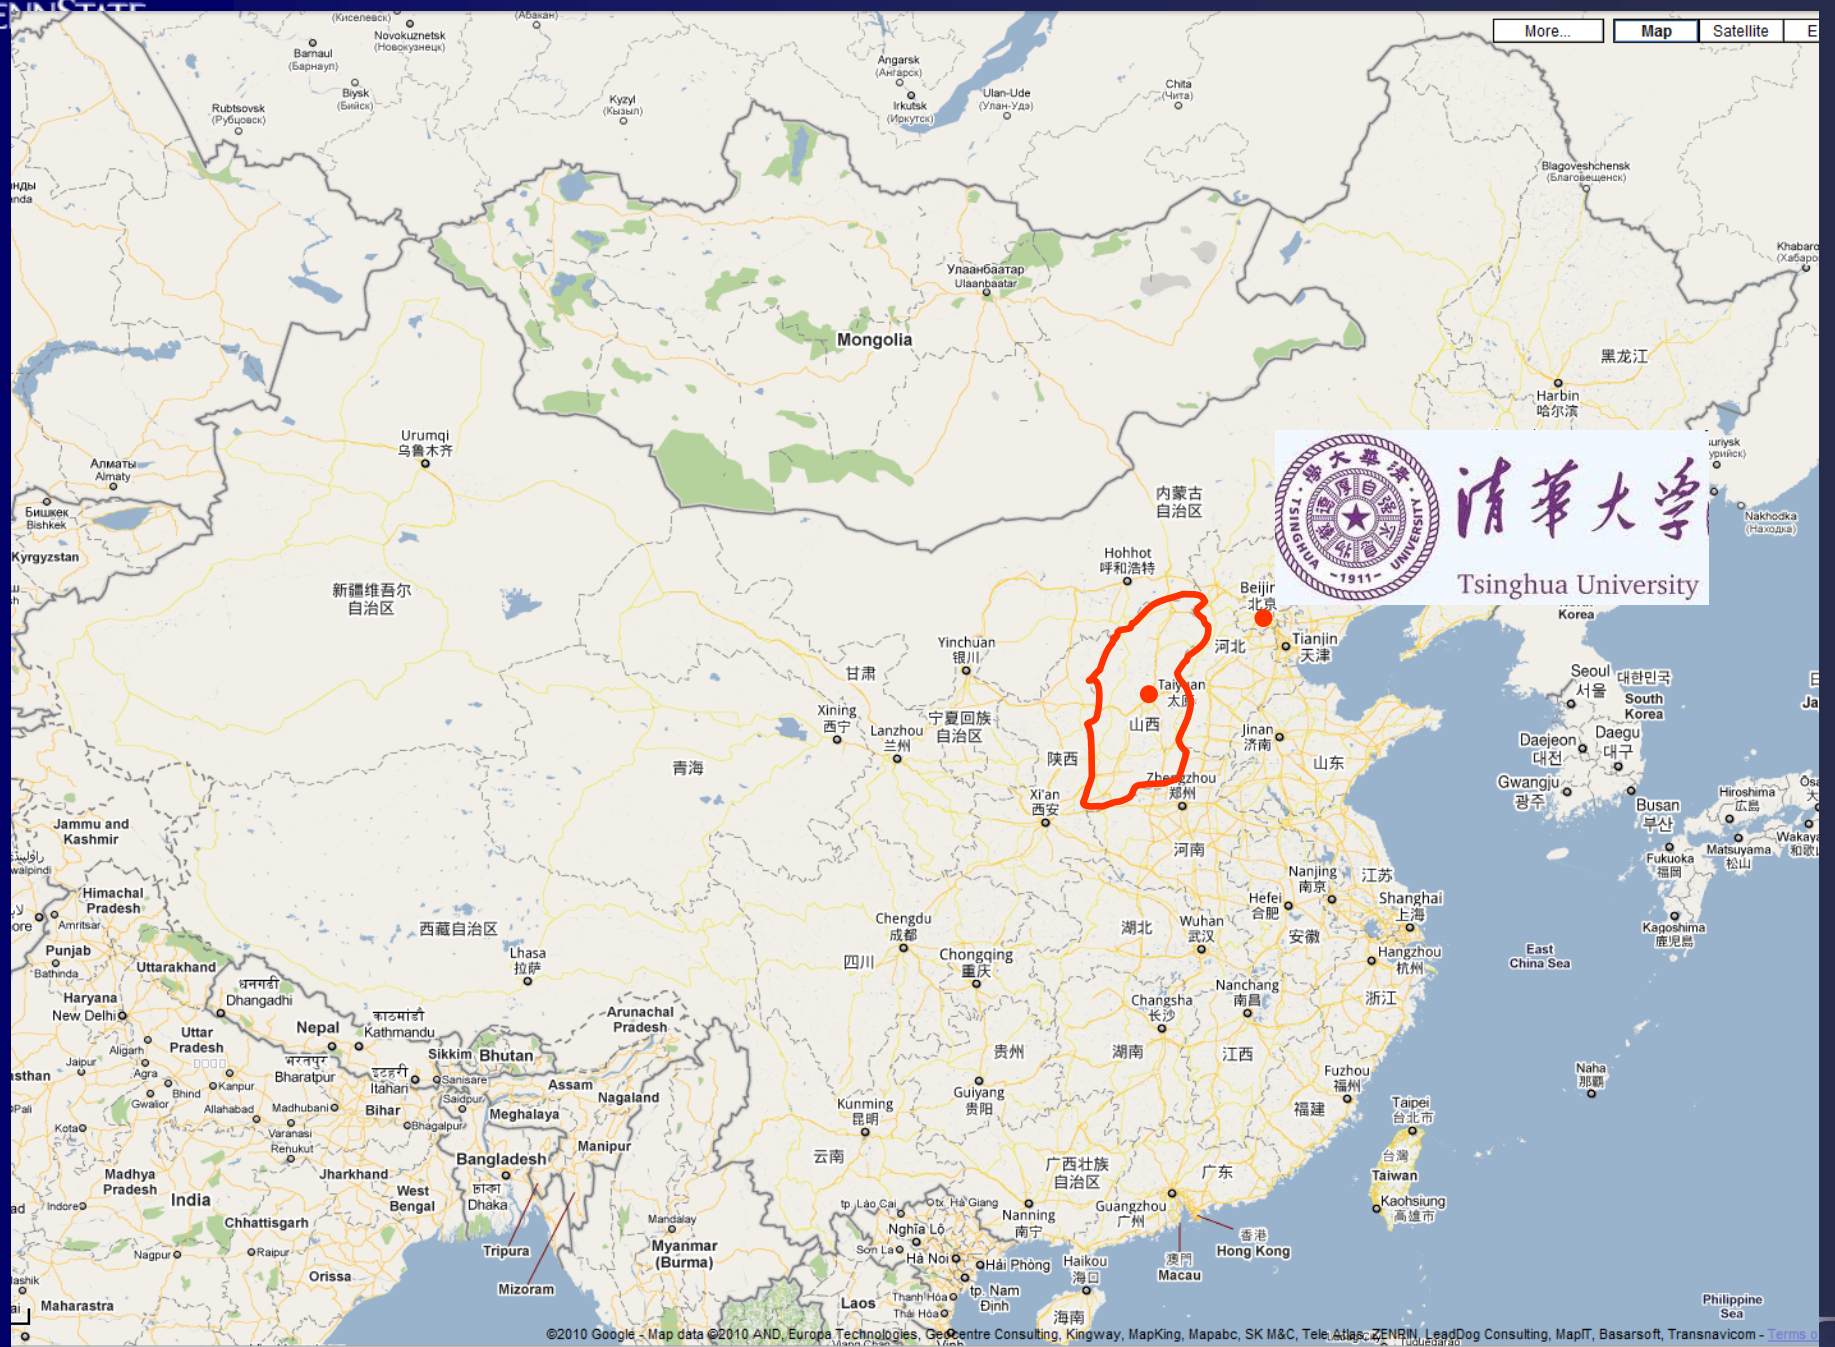

Self-Introduction

- Tianchun Wang

About Me

- Xiaolong "Luke" Zhang
 - Ph.D. in Information Science from University of Michigan
 - Research interest: human-computer interaction, information visualization and visual analytics

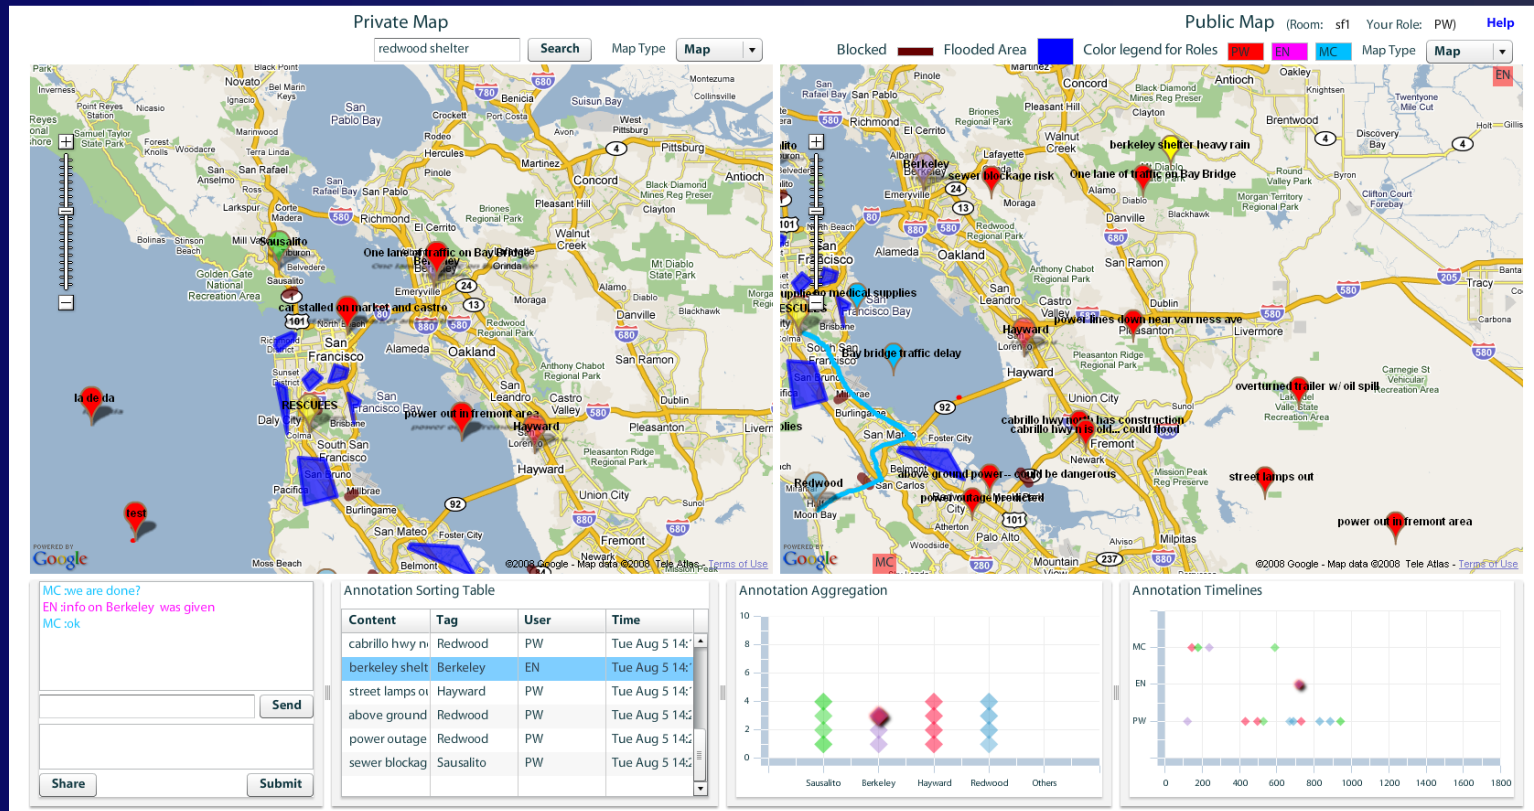

My Research in IST

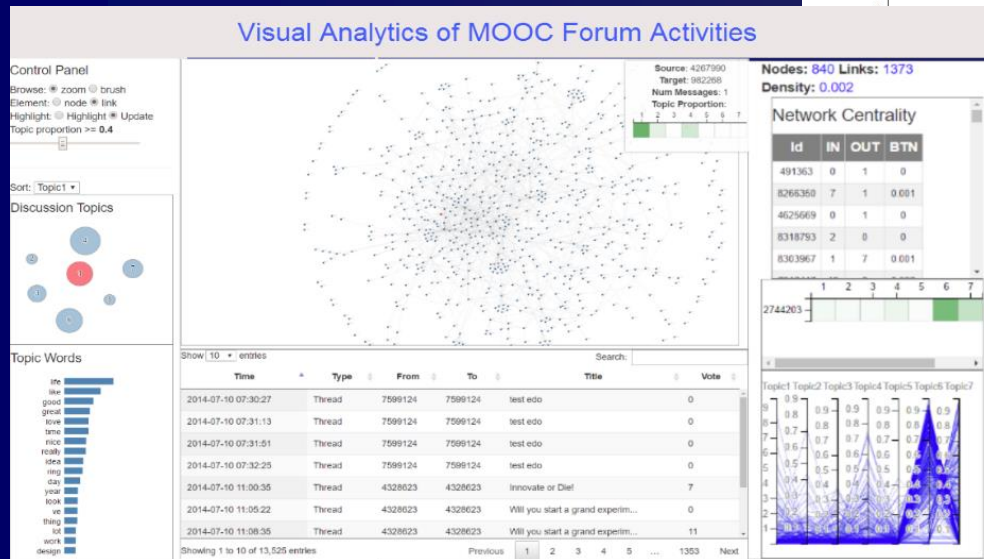

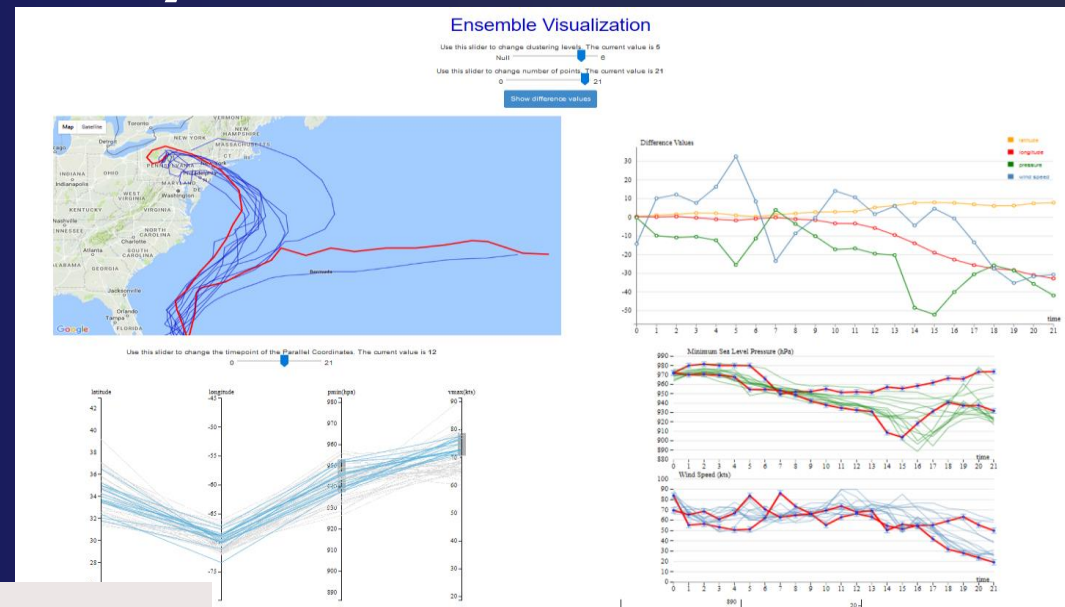

Geospatial Information Visualization in Decision Making

Social Network Visualization and Analysis

Visual Analytics Systems

My Teaching

- IST 210, 220, 489H
- DS 330
- SRA 468

- IST 501, 504, 505, 526

What Is This Course About?

How Much Should We Trust Machines and Algorithms?

Human-in-the-Loop

Visualization becomes more
and more important to data
analysis.

NORAD: North American Aerospace Defense Command

This Course Helps You Know

- What visualization designs/tools/systems to use for specific data types and tasks.
- How to design/implement a visual analytics system.
- How to prepare data for visualization.

Objectives

- Discuss the importance of information visualization and visual analytics;
- Understand the basic theories of visual perception that guide visualization design;
- Choose appropriate visualization designs based on data types and tasks; and
- Build visual analytics tools with current technologies, such as D3, JavaScript, Python, etc.

Class Components

- Lectures
 - Theories, concepts, design guidelines, etc.
- Labs and exercises
 - Current technologies related visual analytics
- Assignments
 - Individual, team
- Team project
 - Implementation of visualization tools for data analysis
- Self-learning components
 - Development of your technical skills

Lectures

- Theories, concept, design guidelines, etc.
 - Visual perception
 - Visualization design
 - Visual analytics
- Technical issues
 - Web programming: JavaScript
 - Data processing: Python
 - Data query: SQL

Lab/Exercise

- Programming
 - Working on your assignments
- Learning about visual analytic tools

Assignments

- Individual assignments
 - Two essays
 - On the roles of visualization in visual analytics
 - Seven programming assignments
 - Visualization of common data types
- Team assignments
 - Project-oriented

Project

- Implementation of a set of visualization tools with specific analytical goals
 - Find a data set by your own
 - Approved by me
- Deliveries
 - Four progress reports
 - Description, data pre-processing, visualization design, implementation
 - One final report
 - Project presentation

Self-Learning

- Help to develop your own skills
 - HTML
 - CSS
 - JavaScript
 - JSON
 - Python
- Modules from [linkedin.com/learning](https://www.linkedin.com/learning)
 - Penn State subscribes its services.

Course Structure

- Tuesday
 - Lectures
 - In-class exercise
- Thursday
 - Lab/exercise
 - Team project times

Evaluation Components

Grading Policy

A	90 and above
A-	85-90
B+	80-85
B	75-80
B-	70-75
C+	65-70
C	60-65
D	50-60
F	below 50

- Not curved

Course Communication

CANVAS

- Centralized repository of course materials
 - **Syllabus**, readings, slides, homework assignments, lab instructions, report instructions, etc.
- Assignment submission
 - All submission must be made online through CANVAS.

Office Hours

- Instructor
 - 1 – 2 pm on Monday
 - Or by appointment
 - E323 Westgate

Course Conduct

- All due dates are hard deadlines.
 - No extensions unless pre-approved by instructor.
- Attendance and participation
 - Involvement of class discussions
 - Let instructor know if you cannot come to the class **in advance**.
- Academic integrity
 - Group responsibility
 - Academic integrity
 - <http://undergrad.psu.edu/aappm/G-9-academic-integrity.html>
 - Writing assignment checked with Turnitin.

around the newly emerging VLE or MLE (managed learning environment); later surveys took a broader view of 'e-learning', leading towards 'technology enhanced learning' which recognizes the often hybrid nature of multiple tools and solutions that support learning and teaching. This new focus on TEL also reflects the use of the term in the revised HEFCE e-learning strategy in 2009:

³ The term 'e-learning' can now sometimes be too narrowly defined to describe fully the widespread use of learning technology in institutions. We think it is more appropriate to consider how institutions can enhance learning, teaching and assessment using appropriate technology. We wish to focus on the benefits and the outcomes from using technology to support learning and related processes, which will be different in each institution.¹

Whilst recognizing the importance of this shift in the definition of e-learning, most UK HEIs continue with the practice of building strategic e-learning provision around a core (or multiple) VLE systems, augmented with complementary technologies such as lecture capture, online asynchronous communication (web conferencing), and classroom technologies such as EVS (electronic voting systems). In terms of any single VLE market leader, as noted in the UCISA 2010 summary of conclusions:

² Commercial VLEs (Blackboard Classic, WebCT and Version 9) remain the most used main institutional VLE, but of the open source VLEs only Moodle has increased in usage. Moodle remains the most commonly used VLE platform overall. Adoption of other open source platforms is negligible across the sector.²

In fact in the UCISA Survey 2010, in response to question 3.4: *What VLE, if any, is currently used in your institution?*, the headline figures for 2010 were Moodle 55%, Blackboard (including Angel, Classic and 9) 40%, in-house VLE 15%, Sharepoint 13%, and Sakai 3%.³ The figure for Moodle was in fact the same for the 2008 survey, whereas reported users of Blackboard were down 10% in 2010. The inclusion of Sharepoint is interesting and would warrant further investigation to determine if and how these users

Communication

- Check CANVAS frequently for
 - Latest update
 - Urgent announcement
- If having concerns, come to see me first.
 - [University Policy](#)

Some Tips

- Do readings and think through.
 - Visual analytics is not just about what tools to use.
 - Not all concepts can be taught through “entertaining” activities.
- Be active to link topics to real-world stories.
 - Keep track of up-to-date IT news and events
- Apply various learning strategies
 - Self-learning modules, learning from peers, etc.
- Take initiatives to sharpen your technical skills
- Communicate with TA, LA and instructor.

Communicate with Teaching Team

- Please let us know if you have any question.
 - Email, office hours
 - Using Canvas to send email.
- Come to see us in office hours.
 - You don't have to have a specific question.

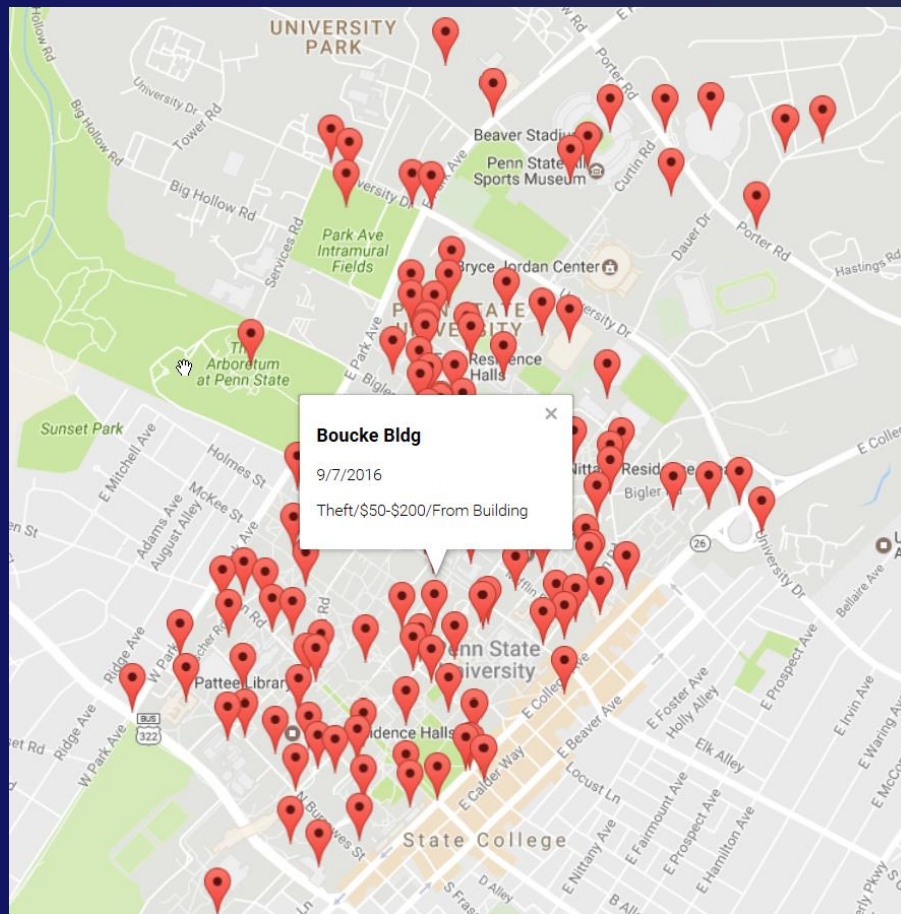

Questions?

Individual Essay Assignment 1

- Solve a puzzle
- Pay attention to the process and tools you used
- Write an essay about how you solve the puzzle
 - See instructions for what should be included.
- Due: Next Thursday before the class.

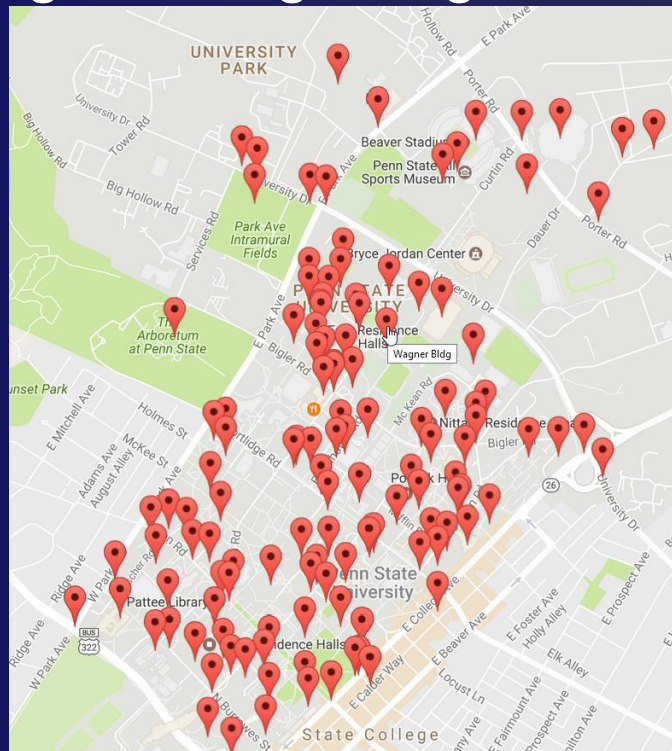

First Programming Assignment

- Penn State Crimes on Google Maps

What We Will Do on Thursday

- Lab/exercise: Google Maps with JavaScript
 - The 1st programming assignment

A Task Before Class on Thursday

- Read the website about Google Maps API key/authentication
 - <https://developers.google.com/maps/documentation/javascript/get-api-key>
 - Get a standard API user key!
 - Know how to use the key in JavaScript
 - Must have the API key ready before coming to the class on Wednesday

What You Need to Do More After Today's Class

- Check CANVAS for the **Readings and Self-Learning resources** links
 - Readings and videos for Week 2
 - Start self-learning modules: **HTML, CSS, JavaScript**
- Work on individual assignment 1
- Think about whom you want to team with
 - Balanced skills: programming, web design, writing, etc.
 - Send instructor a message if you want to be a group with someone.
 - 4 members each group.
